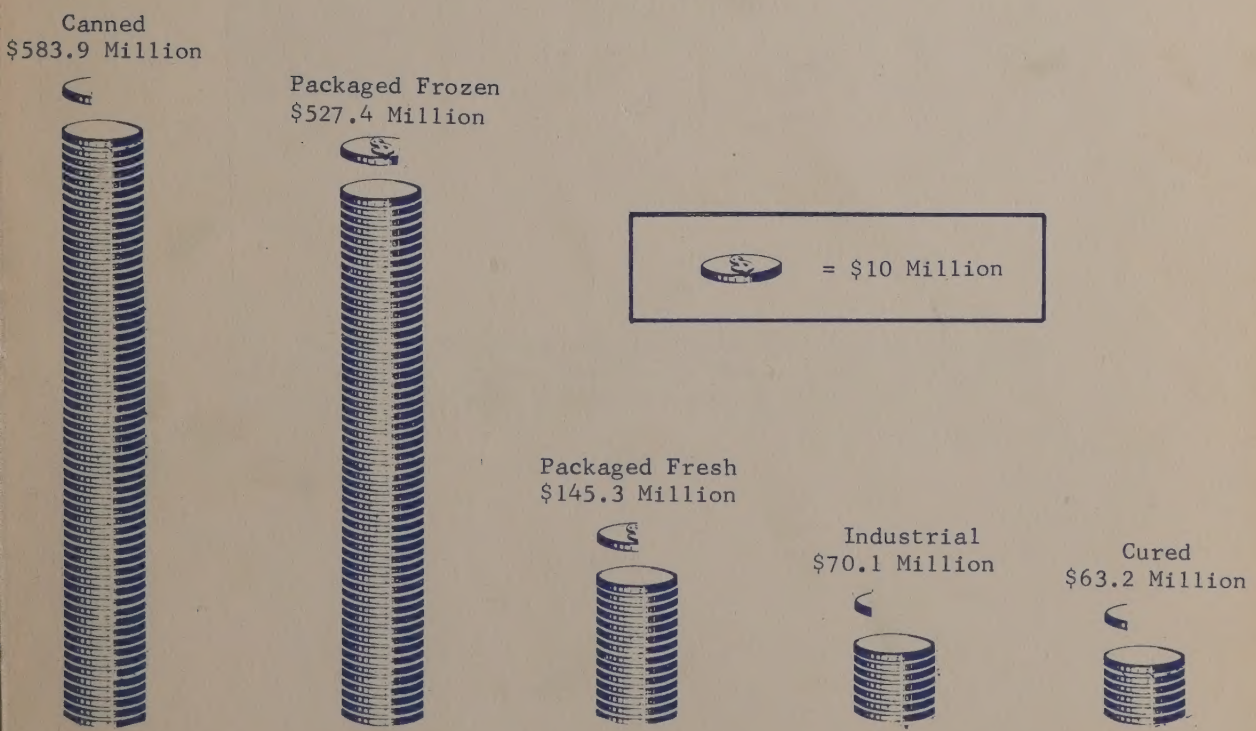
VALUE OF PROCESSED PRODUCTS, 1968



CONTENTS

	Page
Review	4
United States:	
Value of products by States	5
Summary of products	6
Wholesaling and processing	6
Processed fishery products	7
Cured fishery products	16
New England	17
Middle Atlantic	22
Chesapeake	26
South Atlantic	28
Gulf	31
Pacific Coast	34
Great Lakes	40
Mississippi River	44

The value shown for the products constitutes the gross amount received by the producer at the production point, no deductions being made for commission or expenses.

R E V I E W

The production of processed fishery products (canned, packaged fresh and frozen, cured, and industrial) in the United States, American Samoa, and Puerto Rico was worth a record $1.4 billion in 1968. Packaged fresh and frozen products accounted for 48 percent of the total value; canned, 42 percent; and industrial and cured, 5 percent each. The Pacific Coast States led in production with products valued at $461.2 million; followed by the Gulf States, $274.8 million; New England States with $211.4 million, and the Middle Atlantic States, $114.4 million. In 1968, 88,742 employees operated 3,967 wholesale and processing establishments.

The 1968 pack of canned fishery products was 43.0 million standard cases (1.3 billion pounds) valued at a record $583.9 million to the packers--an increase of 1.8 million cases (68.6 million pounds) and $58.3 million compared with the pack a year earlier. The production gain resulted from the recovery of the salmon industry from the disastrous 1967 season, a record pack of tuna, and large increases in the canned production of Maine sardines, mackerel, and shrimp. The pack for human consumption (782.1 million pounds) was 83.4 million pounds larger than in 1967, while the production for bait and animal food (484.9 million pounds) was down 14.7 million pounds from the previous year. The value of three items--salmon, tuna, and animal food--accounted for 80 percent of the total received by producers of canned fishery products.

Fresh and frozen packaged fish and shellfish (fillets and steaks, fish sticks and portions, shrimp and other shellfish products, specialty dinners, etc.) were valued at $672.6 million compared to $568.5 in 1967.

Cured fishery products of 67.2 million pounds were 6.8 million pounds and $1.4 million less than that produced in 1967.

Industrial fishery products were valued at $70.1 million--an increase of $9.1 million compared with 1967. Menhaden products valued at $28.5 million increased $5.5 million in 1968, and was the chief reason for the increase in the industrial value.

Production of processed fishery products includes items produced from raw products imported from foreign countries. Certain items, such as salted alewives, cured salmon, steamed oysters, etc., are shown in an intermediate and also a more advance stage of processing. Production, therefore, cannot be correlated directly with the domestic catch.

As the Nation's principal conservation agency, the Department of the Interior has basic responsibilities for water, fish, wildlife, mineral, land, park, and recreational resources. Indian and Territorial affairs are other major concerns of America's "Department of Natural Resources."

The Department works to assure the wisest choice in managing all our resources so each will make its full contribution to a better United States—now and in the future.
